

RealEstate Document Builder

By: Vishakh

This project aims to implement certain functionalities by facilitating the RealEstate business functionary's in the process of document making, business maintenance, sales and so on thus contributing to the ease operation of the respective business domain.

The anticipated functionalities of this respective project is as follows :-

1. Entire document autofill-up by the customer input.
2. Upload Customer images, property images inside the document.
3. Login Authentication explicitly for business owner, customer and other functionaries.
4. If in customer preference, Email the document to the customer.
5. Manage Customers contact details and there purchased property details for future marketing.
6. Property listings.

My project aims in adding more functionalities along the development phase thus providing the best of service and experience.
